SUGARCRM

Google Street View

Overview

- Download the latest .tgz package
  here: https://github.com/sugarcrmlabs/GoogleStreetView/releases/latest

- Load the package in your target instance using Module Loader

- Log in Navigate to the desired module record view

- In the Intelligence Panel add the Google Street View dashlet

- In the configuration screen of the dashlet select the address field you want to use

Edit Intelligence Panel

Navigate to the record view of the desired module. Create/Edit the Intelligence Panel. Add the dashlet labeled 'Google Street View'.

Exportable List View	A list view dashlet that has an export option	👁
Forecast Pipeline Chart	Displays current pipeline chart.	👁
Google Streetview	Set up Google Streetview for a record	👁
Heatmap	This Dashlet displays a heatmap using google maps api	👁
History	The History dashlet displays Meetings held, Calls logged, Emails received and Emails sent.	👁

Select Address

In the dashlet configuration screen select which address field of the module should be shown.

Street View

The dashlet will now show the Google Street view of the address selected.
